

# MuseMatrix

A build-first fellowship where scientists turn frontier ideas into working products.

Mission: Fork academia

# We operate like a hybrid of an accelerator and a research institute.

Universities are a dying model and the 'academia → spinout' pipeline needs disruption.

Mission: Support academia

# We operate like a hybrid of an accelerator and a research institute.

We complement the academia-to-innovation pipeline by accelerating translation and open practice.

# Where Fields Collide

Each cohort is a question.

Cohort 1 asked: "*What new solutions emerge when scientists, hardware engineers and cryptographers build together for six months?*"

(answer on next page)

Our cohorts mix scientists (eg neuro, biosecurity etc) with builders from diverse technical backgrounds:

AI and agentic systems

AR interfaces

Robotics

Privacy Enhancing Tech

Active Inference

Decentralised Protocols

# Track Record

4 cohorts successfully ran across IRL and Remote locations

Current cohort (Sep 2025): Privacy Enhancing Tech x Bio

## Causality Network\*

VC-backed spinout building trusted hardware for secure autonomous biology.

\*Answer to Cohort 1!

## Castalia

A pop-up city in Mexico held in 2024.  
Goal is to seed a DeSci network state.

## Proof of Learning Protocol

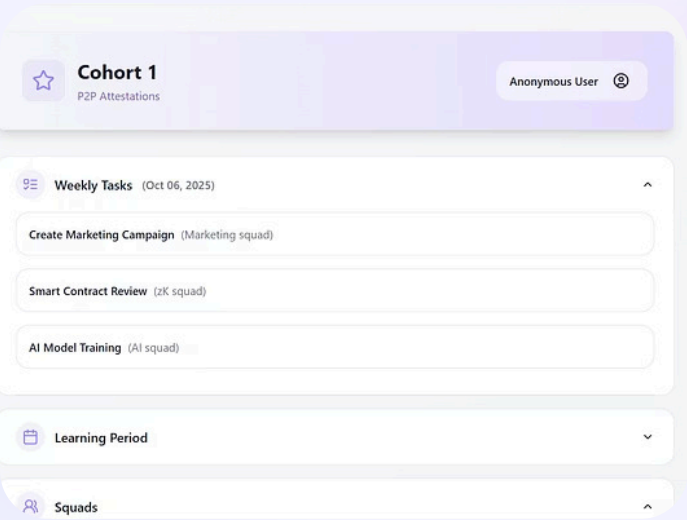

Protocol enabling verifiable skill acquisition and contribution trails

Alumni now founding bioDAOs, running agentic-AI projects, and contributing to protocols and global communities.

**We have IRL nodes across London, Mexico and SF! Dubai, Tokyo, Zurich and Nigeria coming Q4 2025!**

# Proof of Work

# Programme Structure

8-Week Core

**Foundations**

Peer-to-peer learning (eg scientists teach cryptographers and vice versa) and product ideation/validation

1

2

3

Demo Day

**Public Launch**

Live demo of the working system. Open repos, reproducible docs, and a contributor roadmap.

16-Week Sprint

**Build & Ship**

Build prototypes, test with users, document everything!

# Our Edge is Community

- **Dynamic Curriculum:** The engine of the community.
- **Fellows Become Leaders:** Once a Fellow graduates, they are able to run their own cohort or return as mentors.
- **Built by Connectors:** A founding team of community builders with a wide network, so fellows get fast intros, lab access, pilots, and reviewers.
- **Ecosystem Partners:** Partners range across science, crypto, technical, university, and community partners

# Meet the Team

**Bharat, MD**

Founder of DeSci London, the longest-running in-person DeSci community globally. Operator and community architect with deep roots in the ecosystem.

**Erin Magennis**

Host of DeSci Mic for 1.5 years. Co-leads Frontier Tower's bio and neuro lab in San Francisco. Connector and builder.

---

Combined, we bring **4+ years leading DeSci** across science, startups, and crypto.

We formed MuseMatrix to train exceptional talent, build transformative open technology, and leverage our networks to support fellows at every stage.

# Partner With Us

## Join the Matrix

### Be an ecosystem partner

Includes: logo in weekly cohort update, 1 ten minute lightning talk, 1 recruiting AMA, and opt-in interest form routed to you.

**5-10K**

### Request a Project

Itching to see something built? Request a project the fellows will build using your technology or solving a specific scientific challenge with your name behind it.

**20K+**

### Hackathons

Standard sponsor perks plus 1 workshop, 1 judge seat, a post-event office hours block, and a recap post that tags your tech. Winning projects are support by us to continue after the hackathon.

**10-50K**

### Own the Cohort

Naming on an IRL node or the remote track, opening remarks, livestream branding, and 3 curated intros to teams matched to your goals.

**50K +**

# Be early to the next era of Web3 and open science.

Apply for the next cohort or sponsor a brief.
